

help close the gap, but it will not close the gap.

So I do not think we should stand up here and hold out as villains those leaders such as President Bush, the Vice President, who say we need to do exploration.

We need to lessen our dependency on foreign governments. That is a real pickle we are getting future generations into. We are obligating future generations of this country to foreign governments who do not have the best interest of the United States of America in mind. In fact, many of those countries could care less about what happens to the United States of America.

We have got to look out for ourselves. We cannot just tell California to look out for themselves. We as a Nation, including California, need to look out for this Nation. We need to help protect future generations. So this energy problem that we have got today can help be resolved starting today.

Tomorrow, my colleagues are going to hear the President come out with some proposals. I gave my colleagues some proposals tonight. Let us look at those real quick.

Every one of my colleagues, my guess is most of them change the oil in their car every 3,000 miles. Certainly if they do not, they have heard the advertising that you need to change it every 3,000 miles. All of us could help conserve oil without any pain if we simply looked into the owners manual and changed our oil pursuant to the recommendation of the manufacturer and the engineers who put this product together.

My guess is most of my colleagues will find out they actually do not need to change their oil except every 5,000 or 6,000 miles, and they can cut their oil consumption in that car in half as far as their engine oil is concerned.

Turn out the lights when you leave the room. Help get together at a community level, not have policy dictated to you through regulation out of Washington, D.C., from forum and community level, to the community, to the County, to the State levels on ways that your State can help this Nation conserve on energy. At the same time, when you are having those conversations, have open and legitimate conversations about what do we do for energy production.

□ 2230

It is best that we come to the table with an open mind on conservation and it is best that we come to the table with an open mind on energy production. We cannot do one without the other.

The solution for the problem that we are now seeing in this country, that we are experiencing in our every day life in this country, can be resolved through a commonsense, clean, and safe solution of more energy production and more conservation. It works. It is a win-win for us today, and it is a win-win for the future of this country.
